

José Diego Moreno Pulido

Cáceres, España · <https://www.linkedin.com/in/jdmorenopulido/> · +34 677 33 65 98 · jdmorenopulido@gmail.com

Self-taught web developer since 2023, focused in Frontend development. I have created several personal projects using classic web technologies such as HTML5, CSS3, and vanilla JavaScript, as well as React and NextJs. My current focus is on React, NextJs and TypeScript, but I am always eager to explore and learn new technologies.

PROFESSIONAL EXPERIENCE

PCBox

Cáceres, Spain

Support Technician and Sales Assistant

2018

- I completed an internship at the company after taking a course in auxiliary operations and maintenance of microcomputer systems.
- I assisted in the repair of client equipment at both hardware and software levels.
- Taking initiative, I also worked as a sales assistant in the same store, improving my customer service skills within a few days.

PANORAMAWEB

Cáceres, Spain

Web Developer and Community Manager

2020

- I completed an internship at the company after taking a web design and publishing course, conducted by SEXPE, in Cáceres.
- During my time at the company, I assisted my colleagues in developing several client websites, mainly using WordPress and WooCommerce, with Elementor as the page builder.
- Additionally, due to my daily use of social media, I managed the accounts of several clients, creating engaging posts on Instagram, Facebook, and Twitter/X.
- Upon completion, I received a letter of recommendation from the company's CEO.

Personal Projects

Cáceres, Spain

Frontend Developer

2023 - 2024

- I developed a web application to check the weather in the different cities of Spain with NextJs and TailwindCSS, making it responsive and with a modern look
- I developed a random password generator with React, allowing users to choose between 8, 13, and 16 characters with numbers, symbols, uppercase, and lowercase letters for enhanced security. This web application works on any device.
- I created my own bar calculator for a fictional business using HTML5, CSS3, and JavaScript, which could be applied to a real business if needed.
- I designed, structured, and developed a landing page for a fictional business using React and TypeScript. The website stands out for its simple yet effective use of Framer Motion, conditional rendering of views, and managed forms using Basin.
